

The image features a background of a building's roof with two distinct sections. The left section is covered in weathered, greyish-brown indigenous slate tiles, showing signs of age and moss. The right section is covered in newer, uniform grey Riverstone tiles. The building's facade is a light beige color with two arched windows visible at the bottom. A dark grey horizontal band is positioned across the top of the image, containing the Riverstone logo and brand name.

RIVERSTONE®

THE LEADING ALTERNATIVE TO
NEW AND SECOND HAND
INDIGENOUS SLATE

DELABOLE SLATE

SSQ RIVERSTONE

VS

borderline	Phyllite slate	yes
yes	Pronounced Grain	yes
yes	True Grey colour	yes
yes	Pronounced Dressed edges	yes
no	Geological age > 600 million years	yes
yes	Very low water absorption	yes
yes	Very low calcium carbonate content	yes
no	Pre-holing	yes
no	Stock on the ground	yes

“

In summary, the two slates are similar both aesthetically and physically, although I would consider the Riverstone stronger and therefore potentially more durable.
